Additional Eyeliner Care

PLEASE NOTE: Immediately after procedure, the eyelids may or may not appear slightly swollen and/or bruised (you may cover any bruising with concealer). Because of possible swelling the eyeliner may appear to be much thicker and sometimes distorted; the color will appear to be extremely dark, even when soft colors are used. **DO NOT WORRY!** In a day or so, the liner will come to the desired thickness and even out as the swelling goes down. However, the color will remain dark until the healing process is complete (approximately 7 days). At this point, your liner may be too light, uneven, "not enough," etc. Relax, when you return for your "perfecting session," we will adjust. Some additional aftercare information:

- Do not curl your eyelashes or wear any makeup on tattooed area for one week after eyeliner procedure. You may wear eyeshadow but take care not to get any on procedure.
- Never use your fingers to apply vaseline. Use a clean Q-tip to apply the vaseline. In addition, use a wet clean Q-tip to remove any excess pigment from eye area. No fingers!!
- Apply vaseline 4-6 times daily (a light coating only) for 5-7 days until eyeliner is healed - usually one week. This keeps dust particles out of pigmented area and allows pigment to heal in skin. Before bathing and sleeping, apply an additional light coating of vaseline to the eyeliner.
- Do not let the full pressure of the shower hit your tattooed area for one week. The water may run down your face, tho.
- Any possible itching in procedure area may be alleviated by pressing with a clean Q-tip. Do not rub, pick or peel off any pigment in procedure area during the healing process - you will remove pigment. A light peeling may occur, this is normal.
- No sun, sauna, jacuzzi or swimming in chlorinated water or the ocean until the procedure is healed.
- Do not strenuously exercise until procedure is healed if you are prone to headaches.

REMEMBER: Like any cosmetic procedure, this is a process. Please do not expect immediate results; **Please** be patient. Your perfecting session will take care of any flaws. It will be a few weeks before you can fully appreciate the results. **And** you will love it!!! Thank you.

Date and Pigment applied: _____ . If all steps outlined above are not followed, an infection could occur. Signs of infection include increased redness or swelling, increased soreness or pain, continual bleeding, discharge or oozing of fluid, fever, heat/warmth at site, red streaks originating from site, swollen glands. Please seek medical attention and let me know. Thank you.
