PRE-PROCEDURE INFORMATION

- **Eyebrow procedure:** any tweezing and/or waxing and/or electrolysis should be done at least 5 days prior to the procedure. Do not resume any method of hair removal for at least 2 weeks after the procedure.
- **Eyeliner procedure:** any eyelash perming or tinting should be done at least 48 hours prior to the procedure and not resumed until 2 weeks after. Do not wear contact lenses during or immediately following the eyeliner procedure. Remember to bring your glasses. You may resume wearing your contact lenses as soon as your eyes return to their pre-procedure condition.
- Please refrain from the use of aspirin, aspirin-containing medications (unless it is necessary) or alcohol prior to your procedure. Refrain from judgment altering drugs for at least 24 hours prior to any procedure. **No medication should be discontinued without first consulting your physician.**

POST-PROCEDURE INFORMATION

- Delicate or sensitive areas may redden or swell slightly. Apply ice to the treated area for 5-10 minute increments during the first few hours after your procedure.
- You may experience the following for a few days after the procedure:
Edema: There may be moderate swelling of the eyes and lips for the first 10-24 hours.
Bruising: Light bruising may occur although it is rare – concealer or foundation may be used to cover these areas.
Lashes/Brows: You may notice the “sticking together” in the morning or small amounts of pigment “coming off” with ointment. This is normal.
- Lips tend to be very dry after the procedure for the first few days and a “chapped lip” feeling occurs. Please keep lips very moist with white petroleum jelly or vaseline until complete healing has occurred. At day 2–3 of the healing phase, a “peeling” occurs. Do not peel off the pigment; let it come off naturally. The lipliner will take longer to “peel” than the full lip color. The color will appear lighter and almost “disappear” during this phase. During the next few weeks, the color will intensify and complete retention (usually 40% for first application, 60-80% for second application) will be realized at one (1) month.
- See attached additional after-care sheets for specific procedure.

AVOID:

- Makeup products on procedure area for 5-7 days. Clean gently with soap and water in between vaseline applications 1st day or so.
- Applying makeup to the pigmented area for 7 days.
- Rubbing the pigmented area vigorously when washing your face for the first month after your procedure. Scratching or picking away any crust on pigmented area until fully healed – early removal of any crust may result in areas with insufficient pigment.
- Sunbathing or tanning booths that result in direct exposure to the pigmented area.
- Strenuously exercising until procedure is healed (only if you are prone to headaches).
- Swimming in chlorinated pools or hot tubs until healed.
- Exposure of procedure area to the full pressure of the water in a shower for 7 days.
- Using Retin A or other chemical peels over the pigmented area in the future.

GENERAL REMARKS ON SHAPE AND COLOR: Immediately after procedure, treated area will look much darker, much more defined (as if “painted on”) than the final results. Be prepared for the color to be significantly lighter and the overall appearance much softer and more natural after the healing occurs. It will take time for this transition, based on how quickly the outer layer of your skin exfoliates (usually this process takes 4-5 days, complete in 7 days). At this point, the contrast between the initial intense and dark color and the new softer and lighter color may be such that you may be very disappointed. **DO NOT WORRY!!** It is expected and normal; and you will be receiving a second application, a “perfecting session” in 5-7 weeks. Touching up a tattoo prematurely may result in a ruined tattoo. **IF YOU DO NOT SCHEDULE YOUR PERFECTING SESSION WITHIN 10 WEEKS OF INITIAL APPLICATION, YOU WILL BE CHARGED AN ADDITIONAL \$40 AT TOUCHUP, unless prior arrangements are made.** At this time shape and color will be adjusted to your liking. Color can be added very easily, but it is much more difficult to remove! If after your perfecting session, you still wish darker density of color, you may schedule a third appointment within 10 weeks of perfecting session at a minimal cost of \$50.

RECOMMENDATION: If the pigmented area becomes infected or painful, or if you develop a fever soon after the pigmentation procedure, please seek medical attention immediately and notify us at your earliest convenience.

HELPFUL HINT FOR LONG TERM CARE OF YOUR PROCEDURE: The use of a good sunscreen product is highly recommended for all procedures due to fading factors of the sun, especially for lips due to potential photosensitivity of red pigment.
